

SEEING IS BELEIVING!

New Portable Tower Video System Is the Answer for You!

When you really need to have some verifiable, archival information to provide answers to vexing questions, consider our "POGO". The mobile video system that can observe and record all movements associated with pedestrians, vehicles and bicyclists through a pre-determined study area. This lightweight miniature trailer is designed so that it may be pulled to a construction site or traffic study area where it will operate as a self-contained video instrumentation tower. This video system is capable of monitoring traffic or crowds in unusual circumstances. It is particularly useful for demanding heavy traffic situations such as national sports events, conventions, concerts, and for use at major construction sites. The videotapes provide an excellent media for gaining citizen support of projects, for conducting before-and-after studies, for justifying expenditures and for safety analysis.

Standard Features:

- Dual day/night color video camera domes with local and remote pan/tilt/zoom capability
- Quick-release camera & antenna mounting hardware
- Color split-screen generator with quad-view capability
- Color 24 hour real-time video recorder utilizes standard VHS videotape
- Flip-down LCD color monitor
- Deep-cycle 100 hour reserve marine batteries and charging equipment
- 28' extended tower height
- Dual tower rotation handles and innovative handle-activated locking mechanism to quickly lock tower in desired position.
- UHMW plastic slide pads used throughout the entire mast assembly provide long life and high level of corrosion resistance.
- Patented fold-down outrigger system includes dual deployment positions allowing easy setup on uneven surfaces.
- Field-proven cable routing system provides one of the cleanest and best-protected cable routing systems in the industry.
- Forklift pockets and a crane attachment point provide easy transport on and off delivery vehicles.
